

Exploring Paths to Sustained Viral Load Suppression for Women in New York City Living with HIV: An Epidemiological Analysis Using Data from the CHAIN Cohort Study

Dr. Angela Aidala, Associate Research Scientist in the Department of Sociomedical Sciences* Maiko Yomogida, Senior Staff Associate in the Department of Sociomedical Sciences* Dr. Mary Ann Chiasson, Professor of Clinical Epidemiology* Erin Harned* *Columbia University Mailman School of Public Health

The purpose of this presentation is to provide a deeper look at how behavioral factors and unmet service needs affect sustained viral load suppression (VLS) in women living with HIV in New York City. At the conclusion of this presentation, participants will be able to describe how sustained VLS is impacted by behavioral factors and unmet service needs in women living with HIV in New York City and describe how this data could be leveraged to assist policy makers, providers, and program planners to improve services and programming for women living with HIV in NYC.
